# Linux Virtual Web Hosting

Webhosting.net's Linux virtual web hosting services provide a virtual Linux infrastructure in a fully managed, secure environment with a full suite of administration tools that make it easy to build and manage a professional presence on the Internet. All Linux virtual web hosting packages come with a 30-day money back guarantee, backed by our confidence that you'll be fully satisfied with the service and support that we provide. You can sign-up online and choose from a variety of options offering everything from the most basic Linux virtual web hosting services to multiple web site management.

## Overview

---

### **cPanel: Web Hosting Management, Simplified**

Unparalleled Support. Seamless Start-Up Process. Continuous Feature Development. The cPanel & WHM software package is an easy-to-use control panel that gives web hosts, and the website owners they serve, the ability to quickly and easily manage their servers and websites.

Managing your Linux virtual web hosting email accounts, databases, applications, security, file management, FTP and every aspect of your Linux virtual web hosted website couldn't be easier. You'll have powerful tools at your disposal, enabling you to perform essential tasks quickly and easily including creating accounts, backups, databases and managing domain names directly from our control panel.

### **Install Apps in One Click!**

Install popular web based applications simply by answering a few quick questions through our control panel interface. Featured applications include WordPress, ZenCart, Quick Cart and more! Webhosting.net's intuitive and highly customizable control panel interface will provide you with an environment that will grow and evolve as your needs change.

### Email and Webmail Access

Webhosting.net's control panel provides several web-based interfaces for checking email, including Horde, Roundcube, and SquirrelMail. You have the ability to access your email from any web browser, as well as configure many account options including email forwarding and auto-responders along with powerful spam filters, Spam Assassin and BoxTrapper, keeping your inboxes uncluttered at all times.

### Website Analysis

Take a deeper look at your Linux virtual web hosting account with a range of built-in statistics. Programs such as Webalizer, Analog Stats and AW Stats will allow you to see how many times your website has been visited along with how many emails you've been sending.
