

VDI: Virtual Desktop

VDI: Virtual Desktop

Our Virtual Desktop is a secure, personal computer in the cloud. Virtual Desktop allows you to access your "desktop in the cloud" from virtually any device including, Macintosh, Linux , other Windows computers and even from a tablet. For a fixed monthly fee you can leave the stress of computer maintenance, virus protection and bulky hardware storage to us. All you will need is to simply log in to your Virtual Desktop and continue your business as usual. Webhosting.net offers, exclusively, a Single Sign-on feature for your Virtual Desktop. With the Single Sign-on feature there is only one authentication through Active Directory which provides the user "A Master Key" to automatically connect to Microsoft Services through a single login and password. Webhosting Virtual Desktop also eliminates the costly fees and surprise IT expenses that companies inevitably accrue. Contact us today to cut the time and costs of your PC upkeep and let your business soar with a Virtual Desktop.

What is VDI?

Virtual Desktop Infrastructure (VDI) is a technology also referred to as: Cloud Desktop, Virtual Desktop, Desktop as a Service (DaaS) or Virtualization. VDI is a service where a business or Personal desktop resides outside local premises. The VDI can be accessed from any location that is internet enabled. The connection is secured allowing the user to display the VDI on multiple devices and multiple screens.

Single Sign-on Feature

Webhosting.net exclusively offers the ultimate Single Sign-on feature for VDI. Allowing users to sign-on using one login and password to access programs such as: Microsoft Exchange, Microsoft SharePoint and other trusted products. This eliminates the hassle of keeping track of multiple logins within the same environment and allows for a single point of authentication for the user administrator.
